                                                                                                                                                                                                                                                                                                   ;
                                                                                                                     The present Hequence represents the light chain varaible region of murine antibody Act-1. Act-1 is active against human alpha4-beta7 integrin. Musicosal adressin cell adhesion molecule-1 (MadCAM-1) is a ligand of th.s particular integrin. The Act-1 antibody inteferes with alpha4-beta7 integrin binding to MadCAM-1, which is present of high andothalial 'emules in mucosal lymph nodes. Humanised Act-1 can be used to inhibit the interaction of cells bearing alpha4-beta7 with cells bearing a ligand for alpha4-beta7. It can be used for inhibiting diseases such as inflammatory bowel disease. The immunoglobulin can also be used for detection, isolation and diagnosis.

The present sequence represents the consensus amino acid sequence comprising the variable region of murine Act-1 antibody determined from comprising the variable region of murine Act-1 antibody determined from several independent mouse light chain variable region clones. Act-1 is active against human alpha4-beta7 integrin. Muscosal adressin cell adhesion molecule-1 (MadcAM-1) is a ligand of this particular integrin. The Act-1 antibody inteferes with alpha4-beta7 integrin binding to madcAM-1, which is present of high endothelial venules in mucosal lymph nodes. Variable regions were amplified from DNA encoding Act-1 using degenerate PCR primers V20083-84. The degeneracy of the PCR primers V20083-84 is the degeneracy of the PCR primers Consensus sequence, the present sequence was used to construct consensus sequence. The present sequence was used to construct chimeric, humanised Act-1 antibodies, which contain murine antigen binding regions. The humanised immunoglobulin can be used to inhibit and infaltration of tissues, e.g. for treating inflammatory diseases such as infiltration of islammatory bowel diseases. The immunoglobulin can also be used for an infiltration is a infiltration and islammatory diseases such as infiltration with allowed the immunoglobulin can also be used for an infiltration of the interval of the inte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 YLHKPGQSPQLLIYGISNRFSGVPDRFSGSGSGTDFTLKISTIKPEDLGMYYCLQGTHQP 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Heavy chain (W14941) and light chain (W14942) sequences correspond to murine anti-porcine soluble vascular cell adhesion molecule (VCAM) mnoclonal antibody 374 (see also W1493738). They are encoded by a 3F4 human 1gG4 expression plasmid insert (see also T62938). A chimeric antibody specific for porcine VCAM can be produced in transfected host cells. It is useful for diagnosing human rejection of porcine xenotransplants and for improving xenotransplantation of porcine cells, tissues and organs into human
                                                                                                                                                                                                                                                                                                                                                                                                              Antibodies binding to porcine but not human cell interaction proteins - useful to treat and assay for rejection of xenografted porcine organs, tissues or cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 238;

Act-1 is active against human alpha4-beta7 integrin. Muscosal adressin cell adhesion molecule-1 (MadGAM-1) is a ligand of this particular integrin. The Act-1 antibody inteferes with alpha4-beta7 integrin binding to MadGAM-1, which is present of high endothelial used to inhibit the interaction of cells bearing alpha4-beta7 with calls bearing alpha4-beta7 with leukcoyte infiltration of tissues, e.g. for treating inflammatory diseases such as inflammatory bowel disease. The immunoglobulin can also be used for detection, isolation and diagnosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δλ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Light chain (W14937) and heavy chain (W14938) sequences are provided for the murine anti-porcine soluble vascular cell adhesion molecule (VCAM) monoclonal antibody (MAD) 3F4. Hybridoma 3F4 was produced by standard techniques using recombinant, soluble porcine VCAM as immunogen. Chimeric antibodies can be produced by cloning vCAM as immunogen. Chimeric antibodies can be produced by cloning constant region in place of the human gammal C1 regions into constant region in place of the human gammal C1 region. Sequences can provided for 3F4 (chimeric) human G2/G4 cDNA (W14939), a 3F4 human G2/G4 expression plasmid insert product (W14940), and 3F4 human IGG4 expression plasmid insert products (W14941, 42). The chimeric antibodies are specific for porcine VCAM. They are useful for diagnosing human rejection of porcine xenotransplants and for improving xenotransplantation of porcine cells, tissues and organs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1; Gaps

This sequence represents the variable kappa chain of the antibody of produced by hybridoma 1-706-139, and can be detected using the method of produced by hybridoma 1-706-139, and can be detected using the method of the invention. The method is for detecting the presence of antibody which can be present in a test sample. It comprises contacting a test sample can suspected of containing the antibody with an antigen specific for the can produce of the antibody which may be present in the test sample and the presence of the antibody which may be present in the test sample and can the presence of the antibody which may be present that the can control or calibrator, a reagent which binds to the antibody constant region epitopes, where the reagent binds to the antigen antibody constant region epitopes, where the reagent binds to the antigen can be also be used for detecting the presence of antibodies developed can be also be used for detecting the presence of antibodies developed against more than one antigen. The method is used particularly for the epaticular of the problems associated with using an immune sera in the manufacture of the problems associated with using an immune sera in the manufacture of calibrators and positive controls. The present reagents can be readily and reproducibly generated in virtually unlimited quantities and are also useful for quantitating, and monitoring the integrity of, the antigen

The present sequence is that of the murine anti-idiotype monoclonal antibody (MAb) 1A7 variable light chain. MAb 1A7 was raised against the anti-gangiloside 2 (GD2) MAb 1GC2a, which binds an unique eptope of GD2. As the glycosphingolipid GD2 is expressed at high density by human neuroectodermal tumours, e.g. malignant melanoma, neuroblastroma, glotoma, soft tissue sarcoma and small cell carcinoma of the lung, MAb 1A7, or its CDNA can be used in a vaccine to treat or palliate such diseases. They can also be used to reduce the risk of recurrence of a clinically detectable tumour, and detect an anti-GD2 Ab bound to a tumour cell.

MAb 1A7 overcomes immune tolerance and induces an immune response against GD2, which comprises anti-GD2 Ab (humoral response) and

The antigen stimulates the generation of anti-idiotype antibodies that neutralize the aberrant immune response anti-idiotype antibodies that neutralize the aberrant immune response causing the psoriasis. The method is used to treat psoriasis, especially chronic plaque, gluttate, pustuar, plaque-type psoriasis or psoriatic arthritis. The compositions allow the individual's own immune system to act against psoriatic tissue. The present sequence represents the light

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention provides a monoclonal antibody (MAb) designated 1A7, which elicits an anti-GD2 (tumor-associated antigen) immunological response in humans. MAb 1A7 has defined light and heavy chain variable region sequences. The MAb 1A7 and polypeptides can be used for eliciting an anti-GD2 immune response. The polypeptides can also be used for detecting or purifying anti-GD2 antibody. The products can be used for treating GD2 - associated liseases, e.g. melanoma, neuroblastoma, glioma, soft tissue carcinoma, and small cell carcinoma. They can be used for palliating the disease or for reducing the risk of recurrence. The present sequence represents the light chain variable region of MAb 1A7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Monoclonal antibody lA7 which elicits an anti-GD2 immunological response, us=ful for the development of products for the detection and treatment of cancers -

                                                                                                                                                                                                                                                                           ï
                                                                              This polypeptide is the variable light chain region of monoclonal anti-idiotype antibody 1A7. The polypeptide has three CDRs (complementarity determining regions) and four frame work regions. When administered to an individual the 1A7 antibody induces an immune response against ganglioside GD2. The heavy chain variable region of the 1A7 mantibody (Y28469) is also capable of eliciting an anti GD2 response in mammals. Both the heavy and light chain variable regions of the 1A7 antibody produce anti-GD2 T call and antibody responses. The peptides and antibodies may be useful for the modulation of ganglioside GD2, and neuroblastoma, glioma, soft tissue sarcoma, and small cell lung cancer).
                                                                                                                                                                                                                                                                                                                                   61 YLHKPGQSPQLLIYGISNRFSGVPDRFSGSGSGTDFTLKISTIKPEDLGMYYCLQGTHQP 120

The present invention describes a polypeptide containing the variable region of the light chain of a monoclonal antibody, which induces apoptosis, in nucleated blood cells having integrin associate protein (IAP). Also described are: (1) DNA encoding the novel polypeptide; (2) animal or microbial cells expressing the DNA of (1); and (3) agents for the treatment of blood disorders which contain the polypeptide. The polypeptide can be used in the treatment of blood disorders such as leukaemia. The present sequence represents the plasmid pGRM-NIL mouse MABE-11, chain V region which is given in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Immunoglobulin variable domain; primer; polymerase chain reaction; chimeric antibody; human milk fat globule; human breast carcinoma; murine anti-human carcinoma monoclonal antibody KC-4.
                                                                                                                                                                                                          An initial isolation of cDNAs coding for murine anti-human breast carcinoma MAD KC-4 was performed using PCR with commercially swallable pr.mers (see Q62751-062758, wasilable from NOVAGEN). Subsequent c.oning using PCR primers JO20, JO21, JO22 and JO24 (see Q62759-062762) resulted in the isolation of the mouse Ig variable downins. The amplified cDNAs were sequenced (Q62763 and Q62764) and imino acid sequences were deduced from them. Chimeric mouse-human intibodies were constructed using human constant regions so as to produce less immunogenic polypeptides which retained the anti-human carcinoma binding specificity of KC-4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Murine KC-4 immunoglobulin light chain variable region (deduced).
                                                                                                                                                                                                                                                                                                                                                                              1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    An initial isolation of cDNAs coding for murine anti-human breast carcinoma MAb KC-4 was performed using PCR with commercially available primers (see 662776-662783, available from NOVAGEN). Subsequent cloning using PCR primers 7020, J021, J022 and J024 (see 662784-062787) resulted in the isolation of the mouse Ig variable domains. The amplified cDNAs were sequenced (062788 and 062789) and amino acid sequences were deduced from them. Chimmerc mouse-human antibodies were constructed using human constant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           .;

                                                                                                                                                                                                                                                                                                           were prepared by PCR from Dolyadenylated RNA isolated from 100 million KC-4 hybridoma cells. All clones were obtd. from independent PCRs. The sequences of the primers are given in Q87519-Q8756. The sequences of the primers are given in Q87519-Q8756. Independent its derived protein sequenced, without prior purificn., into pCR1000 its derived protein sequenced in both directions. The VL DNA sequence and its derived protein sequences are shown in Q87531 and R70449-R70457. The mature VL chain begins at AA D of framework i (FRI). VL is a group II kappa chain. Part of the CDR3 and all of the FR4 are encoded by JK2. There is a an asparagine glycosylation site in the sequence of R70449-R70456.

The present invention describes a transgenic, non-human animal with its genome altered to constitutively express a molecule having a constant region which can bind an IgE receptor on mast cells in the animals, the molecule having an immunoglobulin structure and being further capable of specifically binding a predetermined antigen. The transgenic animal is substances i.e. with antiallergic activity and the ability of substances i.e. with antiallergic activity, to affect any allergic reaction caused in the animal by the administration of the antigen to the animal, and applying the substance to be evaluated. The present sequence is the mouse immunoglobulin E (IgE) light chain, given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 YLHKPGQSPQLLIYGISNRFSGVPDRFSGSGSGTDFTLKISTIKPEDLGMYYCLQGTHQP 120
